

Iders is:

...a products and systems company

Rail systems for yard controls, crossing safety systems and automated safe switching.

Fiber optic strain measurement systems for structural health monitoring.

...a contract design resource

Starting with the complete development of the CIBC credit and debit systems in 1992, IDERS has provided electronics, software and mechanical design services to a multitude of clients and industries.

With our designs working hard in customer products and systems in over 70 countries World-wide and a track record of design excellence and fixed-budget delivery, IDERS is the resource to turn to for all products and systems design requirements.

...an electronics manufacturing resource

IDERS provides a unique electronic manufacturing service; employing the most advanced high-speed SMT automated assembly equipment to build products of high complexity in low to medium volumes, including 0402 and BGA technology with X-ray inspection.

With a track record of quality, experience and value, backstopped with the strength of our Engineering Team, IDERS electronics manufacturing service can be depended on to fulfill your EMS needs.
